### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance: The issue of the invention is a polypropylene having enhanced long chain branching and increased melt strength characterized in that it is produced by irradiating polypropylene with an electron beam having an energy of at least 5 MeV with a radiation dose of from 5 to 100 kGray in the presence of a grafting agent. Also, independent claim 12 discloses a process for producing a polypropylene having an enhanced long chain branching and a high melt strength comprising the steps of: a) mixing a polypropylene with a grafting agent, b) irradiating under the condition specified in claim 1, and c) recovering polypropylene polymer having a branching index which is lower than the branching index of a linear polypropylene.
2. Upon reconsideration of the reference of record to Saito together with applicants' remarks it has been found that Saito does not disclose polypropylene having long chain branching produced by irradiating polypropylene with an electron beam having energy of at least 5 MeV with a radiation dose of from 5 to 100 kGray. The argument is that Saito merely discloses a modifying polypropylene but does not disclose that the recovery polypropylene has a branching index that is lower than the branching index of a linear polypropylene such that applicants disclose in the present process claim 12. Also, Saito does not disclose the irradiation with an electron beam energy level of at least 5 MeV (or at least 10 MeV in the present claims 2 and 10). Saito discloses a low amount of absorbed radiation ranging as 0.8 kGray. Therefore, Saito does not disclose a process condition specified in the applicants claims.
